Face Scraper

Description:
This program can be used to search for faces in an image (.jpg) and automatically crop and resize the image around the face, outputting a 300x300px image showing the face in the image. Works best with images that only have one face.

Executable program:
faceScraper.r

Other Files:
cropped -> bright.jpg, frodo_B.jpg, luke_S.jpg, obama.jpg
uncropped -> bright.jpg, frodo_B.jpg, luke_S.jpg, obama.jpg

Issues:
When cropping an image with multiple faces, the program only selects a single one to crop

Run program:
Use "cropped" folder to hold photos to be cropped
If desired, save copies in "uncropped" as backups
Choose either automatic image input from a csv or manual input, and follow the instructions in the program
